462,933
562,258
Adopted N = 264,973 (GEFOS discovery: 37,857 cases / 227,116 controls).
Measured effective N·K(1−K) = 31,605 (IQR 31,319–32,325) vs GEFOS
theoretical 32,449 — 2.6% difference, closer than any UKB scenario.
All r_g and MR conclusions are N-invariant.
