

ORs in (a) are per 1 SD higher BMD: Hartley et al. on the heel-ultrasound eBMD scale, Funck-Brentano et al. on the femoral-neck BMD scale. ORs in (b) are on this study's reconstructed areal-BMD per-SD scale. The two scales are not directly comparable (Methods, Effect-scale reconstruction); direction and the hip-versus-knee contrast are the comparables. F1 criterion: hip effect positive AND ≥ knee.
